

# Toby

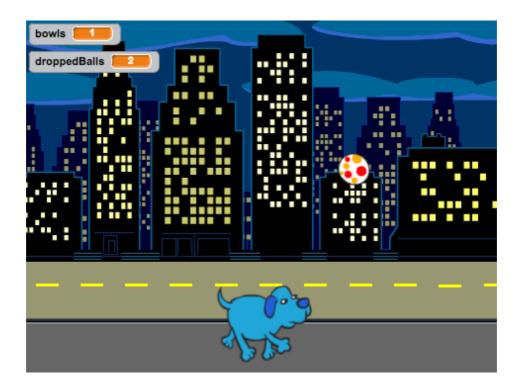

All Code Clubs <u>must be registered</u>. Registered clubs appear on the map at codeclubworld.org - if your club is not on the map then visit jumpto.cc/18CpLPy to find out what to do.

#### Introduction

In this project, we are going to create a game in which Toby the dog has to collect 5 cheese-puffs bowls to win, whilst preventing balls from falling on the floor.

If Toby drops more than 2 balls, the game is over. So the question is: can you keep all the balls in the air?

**Activity Checklist** 

Follow these INSTRUCTIONS one by one

**Test your Project** 

Click on the green flag to TEST your code

## **Step 1: Controlling Toby**

1.	Start a new Scratch project. Delete the cat by right-clicking it	
	and selecting Delete.	
2.	Click on the stage. Choose a backdrop from the Scratch	
	library: the night city with street backdrop is a good choice for	

3. Add a new sprite. select the Dog2 sprite from the Animals section.

this project. Delete the original blank backdrop.

- 4. Dog2 comes with three costumes. Delete the third costume dog2-c as we only want the first two.
- 5. Click on the blue i button to the top left of the sprite picture. Rename the sprite Toby
- 6. Select the <u>left-right rotation style</u> as shown on the picture below:

7. We want Toby to move right when we press the right arrow key. Click on the scripts tab, and add this script:

```
when clicked

switch backdrop to night city with street v

forever

if key right arrow v pressed? then

point in direction 90 v

move 10 steps

next costume
```

8. Click on the Green Flag, and check that Toby can move right when you press the right arrow key. Now we need to add more code to allow Toby to move left as well. Add this to your script:

```
when clicked

switch backdrop to night city with street v

forever

if key right arrow v pressed? then

point in direction 90v

move 10 steps

next costume

if key left arrow v pressed? then

point in direction -90v

move 10 steps

next costume
```

#### Test Your Project

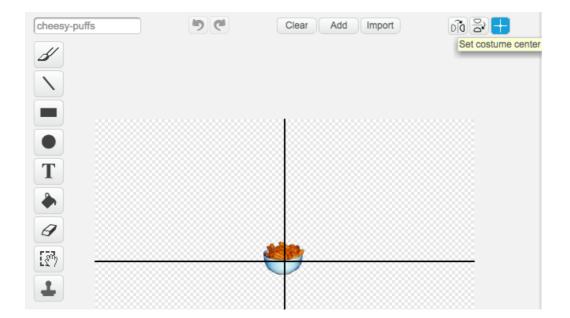

Click the green flag, press the left arrow key. Does Toby move left? Now try the right arrow key!

on the picture below:

## **Step 2:** Keeping Toby busy!

Now that Toby can move, let's give him something to do. In order to win the game, Toby must collect 5 cheese-puffs bowls. We need the bowls to appear randomly at different times and places.

V	Activity Checklist	
1.	Add a new sprite from the library: select the cheesy-puffs from the Things category, and rename it bowl.	
2.	Click on the Costumes tab and reduce the size of the cheese- puffs bowl by clicking on the shrink icon at the top near the scissors. You then need to click on the bowl sprite to make it smaller. The shrink icon looks like this:	
	X	
3.	If you used a different method to resize the bowl, you may need to reset the centre of the costume so that it is at the centre of the bowl. To do this, click on the Set costume centre icon at the top right corner, and move the crosshair as shown	

4. The cheesy-puffs need to appear in random places on the pavement. The y position will remain the same, but the x position needs to change so that the bowl sometimes appears on the right, on the left, or in the middle. Add the following script to the bowl sprite:

```
when clicked

forever

wait 5 secs

go to x: pick random -220 to 220 y: -140
```

- 5. Click the green flag, and wait for a bit. Does the cheese-puffs bowl keep moving to different places every 5 seconds?
- 6. At the moment, the game is too predictable! Let's make it more difficult by hiding the bowl from time to time. Modify the script in the following way:

```
when clicked
hide
forever

wait (pick random 1 to 10 secs

go to x: pick random -220 to 220 y: -140
show
wait (pick random 1 to 10 secs
hide
```

Click the green flag, the cheese-puffs bowl should now appear for random lengths of time, and in random places.

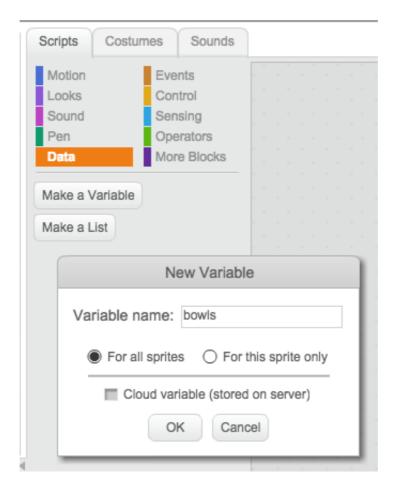

## **Step 3: Counting the bowls**

In order to win the game, Toby must collect 5 cheese-puffs bowls.

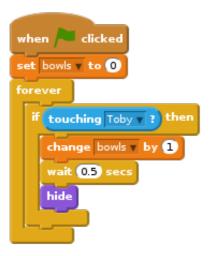

1. Create a bowls variable to keep track of how many bowls

Toby has collected so far.

2. Now we need to add some code to keep track of how many bowls Toby has collected so far. Each time that Toby touches a cheese-puffs bowl, the bowls variable needs to be increased by 1. So add this script to the cheese-puffs bowl sprite. (Make sure that you keep the previous script as well! We need both scripts)

3. The game should be stopped when the number of bowls collected reaches 5. We are going to broadcast a new

message called won to the other sprite and the background to let them know that the player has won.

Modify your second script so that it looks like this:

```
when clicked

set bowls v to 0

forever

if touching Toby v? then

change bowls v by 1

if bowls = 5 then

broadcast won v

stop other scripts in sprite v

wait 0.5 secs

hide
```

4. Add a small script for Toby so that he says 'well done!' when he receives the won message:

### Test Your Project

Click the green flag, does the bowls variable increase each time the dog collects a bowl? Does Toby say "well done" once 5 bowls have been collected?

Challenge 1: Adding sound
Can you add some code to play a pop sound each time a bowl is collected?
Can you add a small script for the background so that it changes and plays music when the player wins?
Hint: You will need to add a script for your stage starting with a when I receive won block

## Step 4: Adding a bouncing ball

Let's make the game a bit more exciting by adding a bouncing ball!

Toby has to catch the ball. If Toby drops 3 balls before he has time to collect his 5 bowls of cheese-puffs, the game is over!

# Activity Checklist

1.	Add a new sprite: select the Beachball from the Scratch	
	library.	
2.	Shrink the Beachball. Make sure that the centre of the	
	costume is set correctly, i.e. at the centre of the ball. You can	
	check this by clicking on the Set costume centre icon, located	
	at the top right corner in the Costumes tab. It is important to	
	set the centre correctly, as it will affect the way the ball	
	moves.	
3.	Now we need this ball to fall from the sky, and bounce	
	everywhere. Add the following script to your ball:	

```
when / clicked
show
go to x: pick random -220 to 220 y: 160
point in direction 135
forever
move 4 steps
if on edge, bounce
```

Click the green flag, your ball should fall from the sky and bounce off the edges of the background. Which number do you need to modify to make the ball bounce faster or slower?

## **Step 5: Add more bounce**

But the problem is: nothing happens when Toby touches the ball. Let's fix this!

1. Modify your script so that when the ball touches Toby, it bounces off as well:

```
when clicked
show

go to x: pick random -220 to 220 y: 160

point in direction 135 v

forever

move 4 steps

if on edge, bounce

if touching Toby ? then

turn (1 pick random 90 to 270 degrees

move 100 steps
```

2. We also need to add some code to detect when the ball touches the floor. The ball seems to be touching the floor when its y position is less than 140. This is an approximate number, and you may need to adjust it, especially if you have chosen a different background.

We are going to modify the script so that the ball moves back to the top (and changes colour) as soon as it is dropped. Import the water drop sound, and modify your script again:

```
when clicked

show

go to x: pick random -220 to 220 y: 160

point in direction 135 v

forever

move 4 steps

if on edge, bounce

if touching Toby v ? then

turn (* pick random 90 to 270 degrees

move 100 steps

if y position < -140 then

change color v effect by 25

go to x: pick random -220 to 220 y: 160

play sound water drop v
```

Click the green flag, what happens when the ball is dropped?

Can you see a new ball falling from the top? Is it a different colour?

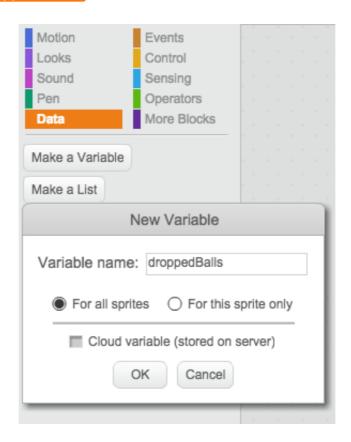

## **Step 6: Counting the dropped balls**

1. We now need to keep track of how many balls Toby has dropped so far. To do this, create a variable for all sprites

2. When we start the game, Toby has not dropped any balls yet, so we need to initialise the droppedBalls variable to 0. Each time the balls touches the floor, the droppedBalls variable needs to be increased by 1.

When the number of dropped balls is more than 3, the game is over, so we will broadcast a new message called gameover to tell the other sprites and the background that the game is over, and the player has lost. Your Beachball script should now look like this:

```
when 🖊 clicked
set droppedBalls v to 0
show
go to x: pick random -220 to 220 y: 160
point in direction 135 🔻
  move 4 steps
  if on edge, bounce
  if touching Toby ▼ ? then
    turn 🔼 pick random 90 to 270 degrees
    move (100) steps
      y position | < (-140) then
        droppedBalls = 3 then
       broadcast gameOver v
       hide
       stop this script ▼
    change color v effect by 25
    go to x: (pick random -220) to 220) y: 160
    play sound water drop v
```

3. When the players wins, the game should stop, and the ball should stop bouncing and hide:

4. Add this script to your bowl sprite to stop it from appearing when the game is over:

5.	Click on the stage. Then click on the Sounds tab, and import
	the spooky string sound from the Scratch library, and the
	triumph sound.

6. Add this script to the stage so that it plays a spooky string sound when the game is over:

```
when I receive gameOver v

change color v effect by 25

play sound spooky string v
```

7. Add this script to the stage so that it changes colour several times and plays a triumph sound when the player wins:

```
when I receive won v

play sound triumph v

repeat 12

change color v effect by 25

wait 0.5 secs
```

8. Finally, add this script to make sure the colour of the stage comes back to normal when the game is restarted.

```
when Clicked
```

Click the green flag, does the droppedBalls variable increase each time a ball is dropped? Test your game in as many ways that you can think of (winning and losing for example) Does it work as expected?

#### Save your project

#### Challenge 2: make the game more challenging

What could you do to make the game more challenging? Here are some suggestions:

- Make the bowls hide more quickly, and for longer. Which parameters do you need to modify to achieve this?
- Make the ball move a lot faster, or add another ball:
  maybe it could be a basketball this time. You can copy the
  script from the beach ball onto the basketball using drag
  and drop, there is no need to rewrite the whole script...
- ☐ You could make a level 2 for your game, with a different background, and more balls bouncing around. Instead of collecting cheese-puffs bowls, Toby could this time collect some donuts. (There is a donut sprite in the Scratch library). You could create a level variable to keep track of the level you're currently playing.

#### Save your project

Well done, you have finished! Now you can enjoy your game!

Don't forget you can share your game with all your friends and family by clicking on Share on the menu bar!
